Personal Profile

Computer Science Engineering (AI) student with strong knowledge of Java and software development. Experienced in building real-world projects like Parking Management Systems and Delivery Applications using core programming concepts, OOP, and database integration. Skilled in problem-solving, clean coding, and developing practical applications with user-focused design. Actively learning full-stack development and improving technical skills.

Education

2024 – 2028 :B.Tech in Computer Science Engineering (Artificial Intelligence)

L.J university, Sarkhej, Ahmedabad, Gujarat, India

Focus on Java programming, data structures, and application development

Built multiple academic and real-world projects

Strong interest in backend and system design

Projects

Entertainment Park Management System | 2025

Java-Based Application

- Developed a management system to handle park operations including rides and food services.
- Designed separate admin and customer modules for efficient system interaction.
- Implemented features to add, update, and remove rides and food items.
- Built structured data handling using arrays and object-oriented programming concepts.
- Ensured smooth user interaction with menu-driven interface and input validation.

Smart Retail Shelf Intelligence | 2026

python, AI model

- Built an AI-based retail shelf monitoring system.
- Detected stockouts and low inventory using Computer Vision.
- Implemented planogram compliance checking.
- Developed demand forecasting for smart restocking.
- Created a dashboard for real-time inventory insights.
- Generated alerts for stock and shelf violations.

Delivery Management System | 2025

Java + MySQL Project

- Built a full-featured delivery system similar to Porter/Blinkit with real-time tracking.
- Implemented delivery status flow (Booked → Picked Up → In Transit → Delivered).
- Integrated MySQL database for managing customers, deliveries, and payment history.
- Developed admin dashboard for cost control, delivery monitoring, and

RentIt – Full-Stack Rental Marketplace | 2026

python . firebase . fully developed website

- Developed a full-stack rental platform enabling users to rent products, hire services, and book spaces.
- Implemented secure authentication system and CRUD operations for efficient data management.
- Built responsive and user-friendly frontend interfaces with clean UI design.
- Integrated database for dynamic data storage and real-time updates.
- Connected external APIs to enhance platform functionality and user experience.
- Deployed and tested the application in a real-world environment with live access.
